Project Brief

Description:
You will be building a six (6) page HTML website, utilizing a single CSS stylesheet to present a visual design that is consistent and effective on all modern browsers and at least three (3) device sizes.

Requirements:
Each page should contain abundant text content, with supporting imagery and goal-directed interactions for the User, as well as page-specific capabilities such as:
- Complex HTML form
- Feature/price comparison chart
- User reviews and ratings
- Product/customer photos
- Product screenshots/videos
- Embedded map and directions
- Etc.

Goals:
- Successful usage of modern, semantic HTML structure
- Successful implementation of organized, cross-platform & robust CSS presentation
- Demonstration of professional and well-crafted UI elements
- Demonstration of effective UX principles, with a focus on Goal-Directed Interactions
- Establishment of responsible time management and project communication skills

Subject Matter:

HCI Students
You will be provided with two (2) possible project choices to choose from as the basis for your WSP project this month.

ADT Students
You will be utilizing the concept, layout and design you produce(d) in the ADT course as the basis for your WSP project this month.
